

**Talk to your healthcare provider** about taking medicine to cure your hepatitis C.

Once you are cured, you do not need to take hepatitis C medicine any more, and because you no longer have hepatitis C, you cannot give it to anyone else.

# Hepatitis C:

Getting  
**Cured**  
is  
**Easier**  
than ever

**Past:** Hepatitis C treatment took up to a year, caused bad side effects and at best, cured about 50% of people. People living with HIV and hepatitis C were less likely to be cured than those who only had hepatitis C.

**Now:** New hepatitis C treatment takes about 3 months, has few or no side effects, and cures at least 90% of people. Hepatitis C medicine works for people living with HIV and hepatitis C just as much as it does for those who only have hepatitis C.

PAST		NOW
<ul style="list-style-type: none"> <li>A weekly shot (Interferon) + twice daily pills (ribavirin)</li> </ul>	<b>Medications</b>	<ul style="list-style-type: none"> <li>1-3 pills once or twice daily</li> </ul>
<ul style="list-style-type: none"> <li>About 12 months</li> </ul>	<b>Treatment Time</b>	<ul style="list-style-type: none"> <li>About 2-3 months</li> </ul>
<ul style="list-style-type: none"> <li>At best, 5 out of 10 people treated were cured</li> </ul>	<b>Cure</b>	<ul style="list-style-type: none"> <li>More than 9 out of 10 people treated are cured</li> </ul>
<ul style="list-style-type: none"> <li>Depression, fever, chills, upset stomach, fatigue and low energy</li> </ul>	<b>Side Effects</b>	<ul style="list-style-type: none"> <li>Usually, no side effects. Sometimes a minor headache or feeling tired</li> </ul>

**You can get hepatitis C again if you are not careful.** To avoid re-infection and to stay healthy, it is important that you:

- Do not** share needles, syringes, straws, or other equipment to inject or sniff drugs
- Do not** share razors or toothbrushes
- Use condoms** for anal and vaginal sex
- Continue to see your healthcare provider(s)** on a regular basis and discuss risks for re-infection
